markpryor@gmail.com

Summary

Senior PHP Developer with more than 20 years' experience designing, developing and maintaining web applications across insurance, education, government and commercial environments.

Strong expertise in PHP, Laravel, MySQL, JavaScript, Vue.js and RESTful APIs, with extensive experience modernising legacy systems, developing scalable business applications and integrating third-party services.

Recently led the modernisation of an AWS-hosted insurance platform, upgrading PHP 5.4 to PHP 8.4 while improving maintainability, security and performance. Experienced collaborating with stakeholders, mentoring team members and driving high standards of code quality and continuous improvement.

Technical Skills

PHP
Laravel
MySQL/SQL
RESTful APIs
JavaScript

HTML5/CSS3
XML/JSON
AJAX
jQuery
Database Design

Vue.js
Git
Azure/AWS
AI Tools (Claude/ChatGPT)
Jira/Confluence

Key Achievements

- Successfully modernised a legacy AWS-hosted insurance platform from PHP 5.4 to PHP 8.4 while maintaining production stability and reducing technical debt.
- Lead developer on enterprise student results platforms for RMIT Australia and RMIT Vietnam, delivering scalable and user-focused Laravel web applications hosted on Microsoft Azure.
- Redesigned legacy on-premise applications into modern cloud-hosted systems with improved usability, security and maintainability.
- Delivered web application enhancements and technical solutions across government, education and enterprise environments using Agile delivery practices.

Soft Skills

Agile/Scrum methodologies
Business Analysis
Stakeholder Engagement

Solution Design

Testing/Debugging

Professional Experience

AFA Insurance | PHP Developer (Remote)

AUG 2025 – MAR 2026

Remote Contract position to modernise PHP Insurance application

- Modernised and refactored legacy AWS-hosted insurance application
- Upgraded application from PHP 5.4 to PHP 8.4
- Used AI-assisted development tools to analyse complex legacy code, troubleshoot compatibility issues and accelerate solution delivery.
- Leveraged AI to support code analysis, debugging, documentation and development activities.
- Evaluated AI-generated solutions and adapted outputs for production use.
- Improved maintainability, stability and code quality
- Diagnosed and resolved complex compatibility and production issues
- Reduced technical debt through safe removal of unused legacy code
- Implemented enhancements and backend business logic improvements

RMIT Training/RMIT UP | Cloud/Application Developer (Hybrid)

AUG 2015 – MAY 2025

Full stack developer at RMIT UP, an education provider, using PHP, MySQL and Laravel to build, maintain and enhance internal applications on Microsoft Azure

- Main developer on redevelopment of Student Results web application, migrating a 10-year-old on-premise PHP system to a modern Azure-hosted Laravel platform. Delivered improved security, maintainability, usability and operational efficiency for administrative staff, teachers and students.
- Lead developer on Student Results platform for RMIT Vietnam, replacing a complex spreadsheet-based process with a scalable web application that significantly reduced errors and improved processing efficiency.
- Supported and enhanced a complex multi-technology Student Progress Monitoring system and provided technical input into redevelopment and modernisation initiatives.
- Integrated applications with internal systems and API-driven functionality.
- Worked closely with stakeholders to analyse business requirements and translate workflows into practical technical solutions.
- Implemented application enhancements, workflow automation and process improvements to increase operational efficiency and usability.
- Performed troubleshooting, debugging, testing and production support for business-critical applications used by staff, students and administrators.
- Contributed to requirements gathering, solution design, technical documentation and application enhancement specifications.
- Provided technical guidance and support to developers, business users and project stakeholders.

Pavement Brands | Drupal/PHP Developer

FEB 2015 – APR 2015

Sole Drupal/PHP developer at Pavements Brands, a teenage fashion company, responsible for the company e-commerce website.

- UI enhancements to website
- Website Maintenance and bug fixing
- Drupal module upgrades

Dialog Information Technology | Consultant**OCT 2013 – JAN 2015**

PHP, Drupal and Lotus Notes Analyst/Developer at Dialog, a technology consulting company.

- Developer on Drupal ticketing website project for Public Transport Victoria, on Drupal Fire and Emergency Planning member portal project for Emergency Management Victoria, and on the DEPI resource and reporting enhancement project (PHP)
- Analysis and development work using Lotus Notes for VicRoads and RACV

Net-Effects | Senior Consultant**AUG 2007 – MAY 2013**

Lotus Notes specialist at Net-Effects, a technology consulting company, working with a number of clients to support, upgrade and enhance their applications

- Contracted to Telstra as Lotus Notes technical expert to enhance and support a Project Management database for 500+ users. This involved business analysis, solution design, development and deployment
- Development and support for web-based grant application process application for Telstra Foundation. This role involved taking requirements from non-technical users, defining planning and business cases and delivering timely solutions
- Also supported and enhanced Lotus Notes applications for Orica, Australian Army
- and other clients including government departments

Education / Qualifications**Knowledge Academy, CAST Application Security Training 2017**

3-day face to face course

Salesforce Trailhead, Salesforce Training 2024

Online training

Lynda.com/LinkedIn, Online Training courses 2016-2020

Courses: Laravel (2020), Web Security (2016), JavaScript (2016), AJAX (2016), CSS/LESS/SASS (2016), Git (20216)
